

NORTH LINCOLNSHIRE COUNCIL

Council

Capital Investment Strategy and Capital Programme 2018-2022

1. OBJECT AND KEY POINTS IN THIS REPORT

- 1.1 To seek approval of the Council's Capital Investment Strategy 2019-2022.
- 1.2 To approve the revised capital programme 2018/19
- 1.3 This paper proposes a Capital Investment plan of £99.5m for 2019-2022.

2. BACKGROUND INFORMATION

- 2.1 Capital expenditure is a key enabler for the Council to fulfil its duties and delivery of its ambitions and Council Plan priorities. Investment in the right things can underpin and support the achievement of improved outcomes for people and place of North Lincolnshire. Capital investment also contributes to efficiencies in the operation of the council and income generation to support long-term financial sustainability.
- 2.2 Local Authorities are now required to publish a Capital Investment Strategy as per the Chartered Institute of Public Finance and Accountancy (CIPFA): Prudential Code for Capital Finance in Local Authorities (2017). The code was updated to introduce more contextual reporting through the requirement to produce a capital strategy, which is intended to allow individual local authorities to give greater weight to local circumstances and explain their approach to borrowing and investment.
- 2.3 There are three key elements to the Strategy.
 - Capital Investment Principles
 - Invest in outcomes
 - Invest for a return
 - Invest to save
 - Prudential Indicators
 - Indicators required by the Prudential Code

- Local indicators
 - Indicators of sustainability, value for money and risk management

The Strategy also sets out the legal and regulatory framework around capital investment. The Local Government Act 2003 is the main relevant legislation and CIPFAs Prudential Code is the core of the regulatory framework.

- 2.4 The current programme has been reviewed in line with the requirement of the Prudential Code and Capital Investment Strategy. A revised programme of capital schemes for 2018/19 is included in Appendix B, which informs the availability of capital resources for the three year period 2019/22. The future capital programme underpins the Council's strategic intent and ambition for the area. The Capital Investment Strategy and proposed plan provides an affordable and agile approach to investment prioritisation to enable the investment required to grow the local economy, enable communities to flourish, keep people safe and well whilst ensuring efficient operation of the council and long-term financial sustainability.

3. **OPTIONS FOR CONSIDERATION**

- 3.1 To approve the Capital Investment Strategy 2019-22, Appendix A
- 3.2 To approve the revised Capital Programme 2018/19, Appendix B
- 3.3 To approve the Capital Programme and Investment Resource 2019-22, Appendix C

4. **ANALYSIS OF OPTIONS**

Affordability & Prudence

- 4.1 Appendix C identifies funding of £99.5m to finance the capital programme over the three year period 2019/22. The funding is broken down as follows:-

Grant and External Funding (£49.7m)

- 4.2 The council seeks to maximise external funding for its capital schemes. This funding includes Government grants, funding from external organisations such as LEP funding. Some external funding requires match funding from the council.

Capital Receipts (£13.6m)

- 4.3 The council has an ambitious programme of asset rationalisation and disposal. This generates capital receipts which reduce the council's need to borrow.

Borrowing (£36.1m)

- 4.4 Further borrowing is required to support the proposed programme. The revenue cost of this borrowing, in the form of interest payments and Minimum Revenue Provision (MRP) payments are incorporated into the Medium Term Financial Plan presented alongside this report. Similarly the effect on Prudential Indicators are incorporated into the Treasury Strategy report also presented alongside this report.
- 4.5 The appropriate level of borrowing for the council is locally determined, taking into account the advice of its Chief Financial Officer. The Council agreed in February 2016 that the limit for capital financing costs should be set between 10% and 12% of the net revenue stream. The Capital Investment Strategy also proposes a local indicator of Total debt as a percentage of long term assets. This indicator is currently 34% and a limit of 40% is proposed.
- 4.6 Capital resources are limited and therefore robust prioritisation is a fundamental element of the Council's stewardship of public funds. A finite programme needs to work for the Council, make a difference to the area and people and generate returns on the investment. In extending the capacity of the programme it is important to avoid erosion of capital funding capacity through investment in schemes which may stand up on an individual basis, but collectively do not deliver the impact they could or exposes the council to too much collective risk. Schemes need to be evaluated relative to each other as well as independently necessitating a programmed approach.
- 4.7 The Capital Investment Strategy sets out the framework for all capital investment decisions. To enable long-term financial sustainability, the Capital Investment Strategy puts in place a more business-like approach to asset management and use of capital to support delivery of the Council Plan. This report proposes an affordable level of internal capital resource to be made available to future projects, after taking account of the existing commitments.
- 4.8 In addition to the committed capital programme the council also recognises that additional capital investment will be needed to support its transformation plans, to meet new and existing legislation; to maintain the infrastructure required to carry out its day to day business effectively and efficiently and to support the regeneration of the area. New investment needs are identified through the council's capital planning process and in line with our Capital Investment Strategy. Decisions are informed through a prioritisation process which takes account of such issues as local need, financial & social return, external funding availability and overall affordability.
- 4.9 Ongoing investment is required in some areas of the council's responsibilities, investment in highways improvements, replacement of machinery and vehicles, replacing outdated technology and improving flood defences being good examples of where this is the case. Other

areas of potential new investment may be more focussed on enhancing our current offer or making the most of commercial opportunities, potential new facilities for children or the purchase of commercial property for local business.

- 4.10 The Council will also look for more efficient ways of working and capital investment is often essential in facilitating these changes. This might take the form of physical changes to council buildings or new customer focussed digital software and hardware amongst other things.
- 4.11 Recognising this need, the capital investment plan for 2019/22 makes available £37m for these purposes, in addition to the £62.5m schemes outlined in the programme.
- 4.12 For planning purposes the current capital programme is prudent in terms of the internal resources currently available for the period of the plan. Grant and external funding can provide additional resource, but the potential for increased operating costs associated with assets funded in this way must be factored into our budget planning to determine affordability. The MTFP provides for the appropriate level of borrowing after taking account of grants and other external funding, and an ambitious target of capital receipts to be generated through the sale of surplus assets.

5. RESOURCE IMPLICATIONS (FINANCIAL, STAFFING, PROPERTY, IT)

- 5.1 The capital programme has to be contained within available resources, including the impact of borrowing on revenue budgets.
- 5.2 Part 1, section 3 of the Local Government Act 2003 places a duty on the council to determine an affordable borrowing limit and to keep this under review. The proposed basis for measuring what is affordable is discussed in section 4.
- 5.3 Future revenue resources are do not yet have certainty pending the Comprehensive Spending Review CSR 2019 and further proposed changes to the local government finance system included the Fair Funding review. It is important, therefore, that the council does not overcommit resources to capital investment, which has an unsustainable impact on its revenue budget.
- 5.4 Calls for additional internally resourced capital schemes or contributions to match funded schemes should be carefully considered against other priorities for the revenue budget and where possible financing costs should aim for the lower end of the affordability benchmark.

6. OUTCOMES OF INTEGRATED IMPACT ASSESSMENT (IF APPLICABLE)

- 6.1 Individual capital schemes are subject to impact assessment as appropriate.
- 6.2 The Local Government Act 2003 provides the legal framework for local authorities in determining the use of capital resources and use of borrowing. The strategy has been written in line with the statutory guidance published by CIPFA: Code of Prudential for Capital Finance in Local Government.

7. OUTCOMES OF CONSULTATION AND CONFLICTS OF INTERESTS DECLARED

- 7.1 The capital strategy is part of the council's strategic and service planning. Consultation takes place on a number of these plans including the Local Transport Plan and an Asset Management Plan for schools.
- 7.2 These plans help the council to identify its priorities for capital investment. Plans are made with reference to professional and technical requirements and in consultation with relevant stakeholders.

8. RECOMMENDATIONS

- 8.1 To approve the capital investment strategy outlined in Appendix A.
- 8.2 To approve a revised capital programme for 2018/19 at Appendix B.
- 8.3 To approve the capital programme and investment resource for 2019/22 at Appendix C.
- 8.3 To confirm that, subject to the approval of the Cabinet Member for Finance and Governance, further capital projects, fully funded by external sources, which are self-financing or which will not cause the council's capital financing costs to exceed 12% of its net revenue stream, may be added to the capital programme when known and assessed by a proper business case.
- 8.4 To authorise the Chief Financial Officer to determine the methods of capital financing within the available funding (revenue budget, capital receipts, borrowing, specific external funding and leasing).
- 8.5 That the Chief Financial Officer be delegated authority to:
 - borrow within authorised limits and the operational boundaries for external debt
 - effect movements between agreed borrowing figures and long term liabilities, in accordance with option appraisal and the achievement of value for money for the council. Movements are to be reported to

cabinet or council as appropriate at the next meeting following the change

- 8.6 To approve the Prudential Indicators contained in Capital Investment Strategy Annex F, as modified by changes made to the capital programme, in accordance with Part 1, sections 3 and 5 of the Local Government Act, 2003.
- 8.7 To report any amendments required to Prudential Indicators during 2019/20, to Audit Committee, Cabinet or Council as appropriate

Capital Investment Strategy

Executive Summary

The North Lincolnshire Council’s Capital Investment Strategy provides the framework for all capital investment decisions. It is a requirement of the Prudential Code for Capital Finance in Local Authorities (2017). The purpose of the Strategy is to make sure borrowing decisions are prudent and that sufficient focus is given to its:

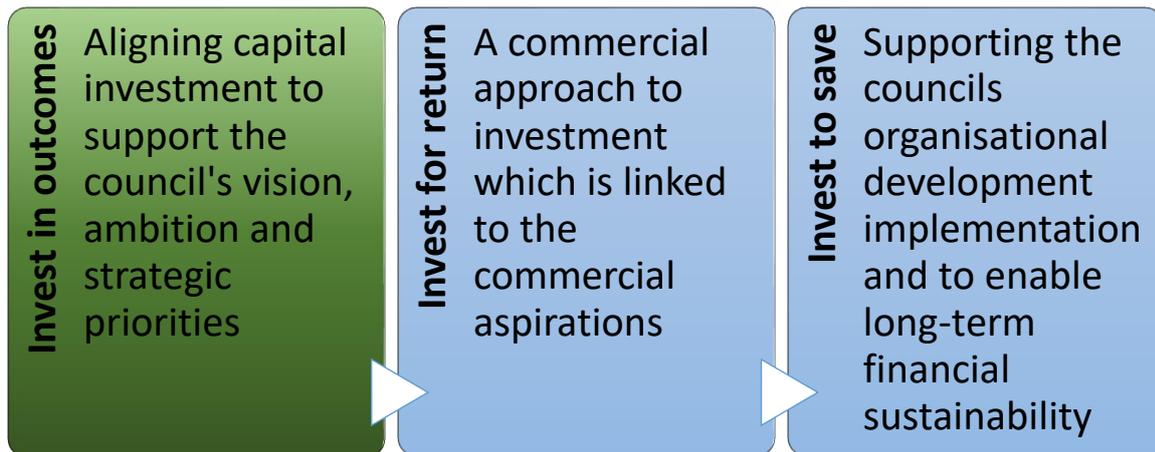

- Longer term sustainability
- Managing the risk attached to capital plans
- Avoiding exposure of public funds to unnecessary or unquantified risk

The Capital Investment Strategy frames the programme of capital schemes which will enable the Council to meet its duties, strategic ambition and priorities for North Lincolnshire set out

in the Council Plan and will facilitate the Council's ambitious transformation programme. As the Council redesigns services and the way in which it operates, capital investment is required to support delivery, ensuring optimisation of assets in the right places to meet community needs and to enable agile ways of working.

There are three key features of the Strategy:

The Capital Investment Principles at page 8, which translate into the three core strands of the capital investment programme.

The Prudential indicators at page 10 which ensure total council investment is sustainable

- The capital financing requirement
- The operational boundary and authorised limit
- Net financing costs set in the range 10-12% of the net revenue budget

The local indicators to manage the Council's exposure to risk (page 11)

- Total debt as a percentage of all long-term assets, maximum 40%
- Investment income as a proportion of net cost of services, maximum 5%
- Value of investment properties as a % of total property, plant and equipment 15% indicative
- Percentage of annual capital programme delivered in year 75% minimum
- A net real rate of return on commercial investments of 2-6% over the cost of borrowing

Legal and Prudential Framework

The Council undertakes capital investment within a legal and regulatory framework. This framework is particular to the Local Government Sector. It includes definitions of what constitutes capital expenditure, how this can be financed, and a prudential regime that sets

limits on the scale of investment based on measures of prudence and affordability. Further detail is provided at Annex A.

Definition of Capital Investment

Capital expenditure is spending on assets and infrastructure required to deliver the best outcomes for the place and people of North Lincolnshire. That includes spending on:

- Operational property, plant, or equipment;
- School buildings and facilities;
- The area's infrastructure, primarily the road network and investment to stimulate the local economy;
- Investments in property designed to achieve a commercial return; and
- Grants or loans (see Annex C for more details) to other bodies or individuals for purposes which would be capital for the council;
- The establishment or purchase of shares in organisations designed to deliver public services

Funding Capital Investment

The Local Government Act, 2003 requires capital spending to be accounted for separately. The council also has to fund capital expenditure in certain ways. These include:

- Grants and other external funding;
- Borrowing;
- Capital receipts from the sale of council assets;
- Direct contributions from the council's revenue budget
- Funding through partnership arrangements.

There are restrictions to each type of funding;

Grants and external funding

These are usually from government, non-governmental public bodies and from private sector partners. These are generally allocated for specific schemes or areas of spending, such as investment in schools, with some limited scope to apply to other Council priorities.

Access to other forms of funding to promote regional growth and infrastructure development in the region are available through the Local Enterprise Partnerships.

Borrowing

For funds raised through borrowing Part 1, section 3 of the Local Government Act 2003 sets some specific requirements. It places a duty on the council to set an affordable limit to its borrowing and to keep this under review. The cost of all future borrowing for capital purposes falls wholly on the council and it must ensure that its revenue budget is sufficient to carry the cost of financing its debt.

Borrowing is primarily arranged through the Public Works Loans Board, an arm of the Treasury, because of the favourable rates available. But Councils can also borrow from banks, public and private pension funds, and any other lending institutions approved to operate in the UK; they can also issue Bonds on the capital markets, but only on a large-scale.

There is an expectation that the term of borrowing will broadly match the useful life of the assets it will fund.

Capital receipts

These are generated by the sale of surplus assets – for example buildings or land no longer required for council purposes. Normally councils must use these receipts for new capital investment- they cannot be used to cover the day-to-day costs of running council services. However for the plan period government has waived these rules so that councils can apply receipts to short-term expenditure on service transformation in the same year.

Direct contributions from revenue

These are also permitted. In addition, if the council chooses to lease an asset rather than purchase it the lease costs are paid for from the revenue budget. For reasons of value for money, the council has purchased new vehicles and equipment rather than entering into lease arrangements for a number of years now, but the option remains.

Funding through partnership arrangements

These can be with other public sector or private sector bodies, and may take a number of forms including delivery through a commercial vehicle established for a specified purpose.

The Prudential Code

It is for Councils to determine their own programmes for capital investment in the delivery of public services. But in undertaking capital investment, the Council is required by regulation (under part 1 of the Local Government Act 2003) to have regard to the Prudential Code for Capital Finance in Councils developed by the Chartered Institute of Public Finance and Accountancy (CIPFA). The Prudential Code is a professional code of practice which is intended to support Councils' decision making in the areas of capital investment and financing.

The Code was last updated in December 2017, and now requires all Councils to produce a Capital Investment Strategy. In acknowledgement of the requirements of the updated Code, Council approved an outline capital investment strategy in March 2018, and committed to

developing a full strategy during 2018/19, ensuring that it complies with the revised code and adopts best practice in managing its investment resources.

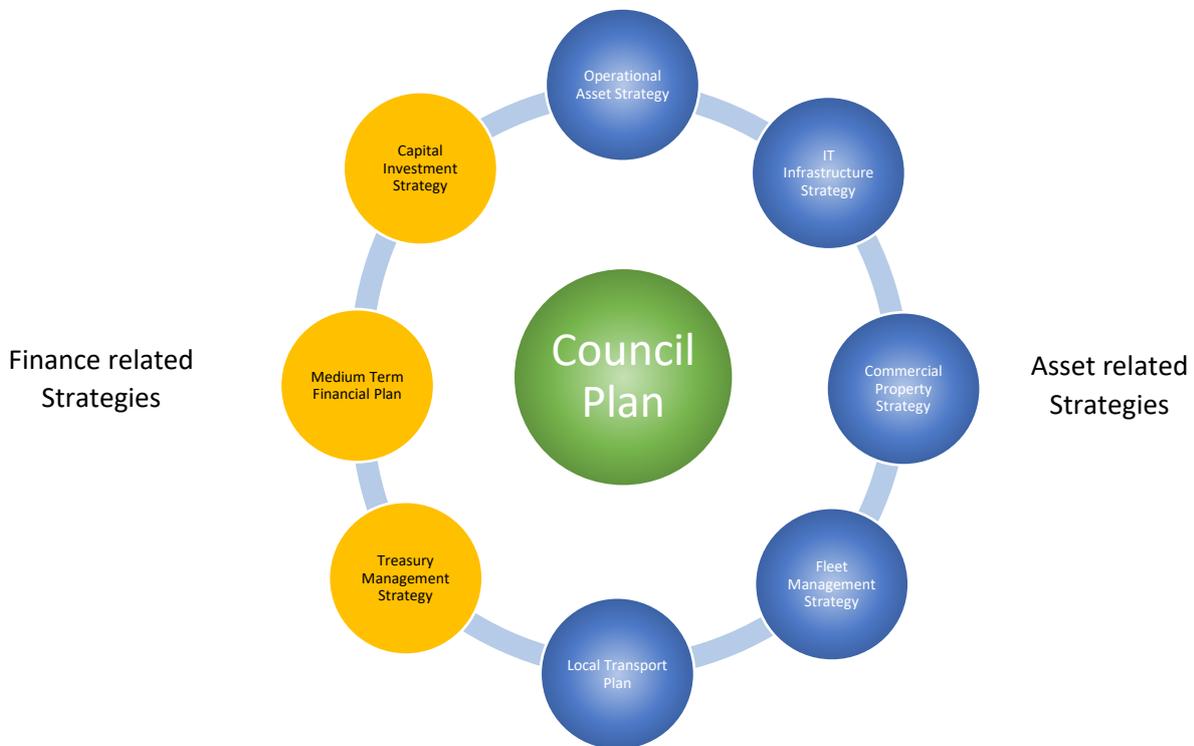

The revised Prudential Code (2017) requires Councils to take a longer planning horizon than the required three years specified for setting of the prudential indicators. As part of this longer planning horizon Councils should consider the whole life costs of major capital investment decisions to establish their affordability over the whole life of the asset.

The Council’s Strategic Planning Framework

The Capital Investment Strategy does not stand in isolation. It is a part of the overall Governance framework of the Council, and it links to other key strategies and plans.

Its first point of reference is the **Council Plan** which sets the direction and priorities for all that the Council does. This sets out the Council’s ambition for North Lincolnshire to be the best place to live, work, visit and invest. The Council is committed to deliver better outcomes for the people and place of North Lincolnshire by growing the economy, keeping people safe and well, and enabling communities to flourish.

This is translated into action through a range of other inter-related plans and strategies as shown in the diagram below:

There are Finance related plans and strategies:

The Medium Term Financial Plan which translates the ambitions and priorities of the Council Plan into specific decisions on the deployment of resources, both revenue and capital, typically over a four year period. It does this through a set of resource assumptions, and a cross-cutting financial process driven by the Council's priority outcomes, which feeds into business plans.

The Capital Investment Strategy which is integral to the delivery of the Investment Plans, and prioritises the use of capital to deliver the desired outcomes. It also ensures that Council investment is sustainable in the long-term and that financial risk is effectively managed.

The Treasury Management Strategy key purpose is to manage the risks surrounding cashflow, investment and debt management activity. It seeks to ensure the Council understands its Treasury Management risks and makes a conscious decision around how much risk it is prepared to accept. Professional and Government Guidance requires the Council to give priority to the security and liquidity of an investment over the return on that investment.

There are also a number of asset related plans and strategies:

The Operational Assets Strategy which sets out the strategic approach to managing the Council's property assets in a way which most effectively delivers the Council's strategic and local service priorities and outcomes. It also seeks to achieve value for money from its property assets.

The Commercial Property Strategy which aims to secure additional commercial income to supplement the Council's core funding base and to facilitate economic growth in the area.

The IT Infrastructure Strategy which sets out the priority investment necessary to enable the council to operate its business securely and to maximise technology to change the way we work and the way we connect with the public.

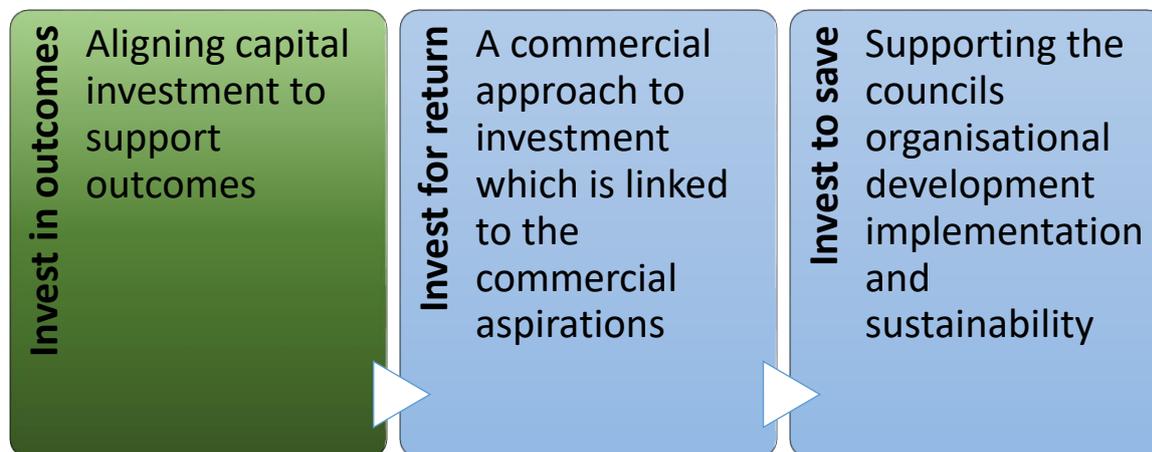

The Fleet Management Strategy which sets out the optimum investment in the council-run fleet of vehicles, to ensure operational efficiency and value for money

The Local Transport Plan (LTP) is a vital tool to help the Council work with its stakeholders to strengthen its place-shaping role and its delivery of services to the community. The LTP determines the investment priorities for infrastructure assets which best meets the area's needs.

The Asset related plans and strategies provide an informed view of current and future needs over a medium and longer planning horizon. These plans focus on the maintenance, improvement and acquisition of assets required to deliver the Council's strategic priorities and outcomes. They also provide an assessment of the long-run operating costs of the Council's assets and how they can secure value for money. The Commercial Property Strategy aims for sustainable long term income to support the Council's budget; and the Operational Assets Strategy also plans for the disposal of surplus land and assets to generate capital receipts for reinvestment.

Framework for Investment Decisions

The Investment Strategy focusses on three key strands of investment

Capital Investment Principles

Capital investment is informed by the following principles:

Theme	Investment Decisions
Making Informed Decisions	<ul style="list-style-type: none"> • Investment decisions are aligned to agreed ambitions, goals, outcomes and priorities • Investment decisions enable achievement of the overall levels of income from commercial sources set in the budget • Investment decisions and commercial operations demonstrate an ongoing tangible benefit and do not generate legacy cost
Manage Risk	<ul style="list-style-type: none"> • Investment decisions are congruent with Council values • Investment decisions meet the relevant regulatory requirements set nationally • Investment decisions avoid exposure of public funds to unnecessary or unquantified risk

Invest in Success

- Investment decisions and commercial operations demonstrate benefits to local people, priority given to projects that provide social value and support vulnerable people.

Prioritising investment

Capital investment is one means the Council has to achieve the outcomes it wants for local residents. Capital investment generally creates an asset which makes a contribution to delivery of Council priorities for periods of more than one year, and it is on this basis that the Council can choose to spread the cost of creating the asset over its useful life through borrowing. This ties up a proportion of the Council's revenue for long periods until the debt is discharged, and there needs to be a careful judgement of the trade-off between utilising limited revenue resource into capital investment for the long-term with the flexibility of investment into the direct running costs of services. At scheme level this should take the form of an appraisal of the different options available.

The council's own resource, primarily the statutory power to borrow for capital purposes, is limited by what it can afford to repay over the lifetime of its assets, and so must focus on the right things. The council has already committed significant funds of its own to finance its current asset base, and still carries a debt burden from that earlier investment; and there is further planned investment of own resources of £88.0m in the current programme, primarily from borrowing.

For some areas of investment there is national funding available from Government: grants for maintained educational and other provision for children, where the council has a statutory duty to ensure sufficient places for the children of the area; grants for the local highway infrastructure and traffic management; and further funding via the Local Enterprise Partnership for infrastructure which supports economic growth.

A finite programme needs to work for the Council, make a difference to the people and place of North Lincolnshire and generate returns on the investment. The following considerations should apply:

- The need for **prioritisation** of resource due to finite resources, where schemes are not only considered on their own merit but also in relation to one another to avoid erosion of capital funding capacity
- The reality that the existing programme is close to the **limit** of what is **prudent** in terms of internal resources currently available in the plan period. This is based on the

proximity of the current programme to the 10 - 12% range of borrowing costs limits set by Council

- If further borrowing is required outside this limit, it must be robustly **self-financing**
- A **risk based approach** to capital investment, with an understanding of how new investments affect the mix of risk and reward
- The requirement for a **full Business Case** to be produced for higher risk schemes
- High-level **evaluation** criteria

The council is transforming the way it does business. This will mean it delivers services in different ways. It also means it will be focussing on optimising operational assets and releasing of surplus assets. This has the potential to generate capital receipts and revenue savings that can be reinvested to support the council's strategy. Schemes that deliver a positive return should be vigorously tested, monitored and evaluated. Schemes that require Council intervention to stimulate private sector investment should be tested against full return generated even if it is indirect (NDR/Council Tax Growth).

Prudential Indicators

The Council also has a set of prudential indicators to help it decide what is prudent and affordable.

Prudential indicators were introduced as required proper practice when the Prudential regime was introduced by the Local Government Act 2003. This gave Councils the freedom to determine their own level of borrowing for long-term investment in place of the annual borrowing limits previously exercised by Government. The indicators were designed to provide councils with a reference point to test and ensure compliance with the central requirements of affordability, prudence and sustainability. **They provide a measure of how much capital investment the Council can afford to undertake and sustain over a longer term period. This is important since borrowing decisions taken now commit the council to payments over periods of up to fifty years depending on the nature of the asset.**

In setting or revising its prudential indicators, the Council is required to have regard to the following:

- **Council Priorities** (Council Plan)
- **Stewardship of Assets** (e.g. asset management planning)
- **Value for Money** (e.g. option appraisal)
- **Prudence and Sustainability** (e.g. risk, implications for external debt and whole life cost)
- **Affordability** (e.g. implications for the council's revenue income stream)
- **Practicality** (e.g. achievability of the forward plan)

The Key indicators prescribed in the Code are:

- **Capital Financing Requirement** – the Council's underlying need to borrow for capital investment purposes. This represents the actual need to borrow if the

Council's current and future capital plans are delivered in full, on top of the investment it has already undertaken.

- **Operational Boundary** – an estimation of all of the borrowing that the organisation may need to undertake (revenue and capital) to run the business.
- **Authorised Limit** – the level of borrowing that could be afforded but may not be sustainable, and if breached requires immediate corrective action to be taken.
- **Net Financing Costs** – the percentage of revenue budget set aside each year to service debt financing costs. **The Council has set its limit at 10-12%**. This is a key indicator of affordability. Although Council circumstances differ it is informative to note that the estimated Unitary Council average in 2018-19 is 6.56%.

These indicators can be supplemented by other **local indicators** to help the Council to determine what an appropriate limit to capital investment is, and the degree of risk for the organisation associated with its investment programme. It is proposed that the following are added as local indicators. The most pertinent criteria are those which have the greatest bearing on the Council's exposure to risk drawn from the Balance Sheet and its ability to deliver a balanced budget in-year.

- Total debt as a % of long term assets - total debt can pose both short term liquidity risk and long term cash pressures, therefore the lower the relative debt the lower the risk to the council. **The proposed limit is 40%**
- Total investment income as a % of net revenue expenditure – This gives an indication of how reliant a council is on investment income to deliver a balanced budget. **The proposed limit is 5%**
- Value of Investment properties as a % of total Property, Plant and Equipment - A higher total value of investment property indicates more opportunity to raise income. However, return on investment can vary depending on the type of investment and on the investment strategy. **The indicative limit is 15%**
- Percentage of initial capital programme delivered by financial year-end. The higher the percentage the more robust the capital investment plans. A low percentage could be an indicator of a failure to deliver service outcomes in a timely way with an impact on the quality of service, or of poor value for money. **The proposed minimum is that at least 75% by value of the initial programme should be achieved**
- The return on commercial investment to be set at between **2% and 6% return** net of the Councils' cost of borrowing.

CURRENT POSITION ON INDICATORS	2017/18	Trend	2016/17
Total Debt as %age of long term assets	34.2%	↑	31.4%
Investment Income as %age of net revenue expenditure	3.3%	↓	3.4%
Investment Properties as %age of Total PPE	9.1%	↓	10.3%
%age of capital programme achieved	59.1%	↑	52.2%

Risk and Return

The Council takes a risk-based approach to capital investment so that the council's appetite for risk informs the size of investment available to higher risk projects.

In considering the initial financial risk of a business case the Net Present Value (NPV) on the whole life cost of the scheme, and Internal Rate of Return (IRR) financial appraisal techniques should be utilised where appropriate. NPV will be the key financial assessment tool. NPV calculations will be carried out using the Government's Green Book discount rate, currently 3.5%. These techniques are standard in business decision-making.

These techniques are most suited to schemes which are intended to deliver a financial return, whether in the form of cost savings which accrue by adopting a more cost effective model of service delivery, or schemes with a specific purpose of generating income through rental income or capital appreciation. This would include 'spend to save' initiatives.

However, not all Council capital projects can be evaluated in this way as there may not be a direct financial return. Some schemes will generate social value; or may be a legal requirement, such as health and safety; or discharge a public duty, such as the requirement to ensure a sufficiency of school places in the local area. For these a different set of measures is required, which will include a value for money assessment.

Any capital bid is based on a series of assumptions, and inevitably requires a degree of estimation. To help ensure cost assessment is robust the Council makes use of the professional judgement of qualified surveyors and engineers for its building and infrastructure projects. It is important that estimations do not show an optimism bias.

It is also important that the phasing and scale of the programme reflects the **capacity** of the Council to deliver it. The consequences of not doing so will include:

- Projects not delivered to required timescales and/or budget which affects the quality of service provided
- The cost of delivering the programme is materially different to initial estimate

The Council is able to re-profile and reallocate capital resource, providing that no prudential indicator is breached. This may include the acceleration or deferral of schemes to a later year. It is also prudent to re-assess the programme from time to time to ensure it continues to align with Council priorities.

All capital projects should have a risk log that is regularly reviewed and updated. All risks that may affect a project must be considered. These can include political, economic, legal, technological environmental and reputational as well as financial. Projects should be managed using the **project management toolkit**, which provides guidance and templates which can be found at [KI 3456 Project Management Templates on Topdesk](#)

Additional consideration needs to be given to schemes that the council invests in solely for a return, in accordance with the Localism Act.

The council's investment in commercial property will align to its outcomes or Council Plan priorities and evidence that the return is 'incidental' to broader social and economic aims. If this is not possible or the link is not clear e.g. in the case of an out of area investment, legal advice and other relevant professional advice will be required and consideration needs to be given to ensure the investment is not deemed to be ultra vires.

CIPFA will be issuing further guidance shortly but in the meantime are advising Councils to have regard to the Statutory Investment Guidance the informal commentary to which cautions Councils against:

- becoming dependent on commercial income;
- taking out too much debt relative to net service expenditure; and
- taking on debt to finance commercial investments.

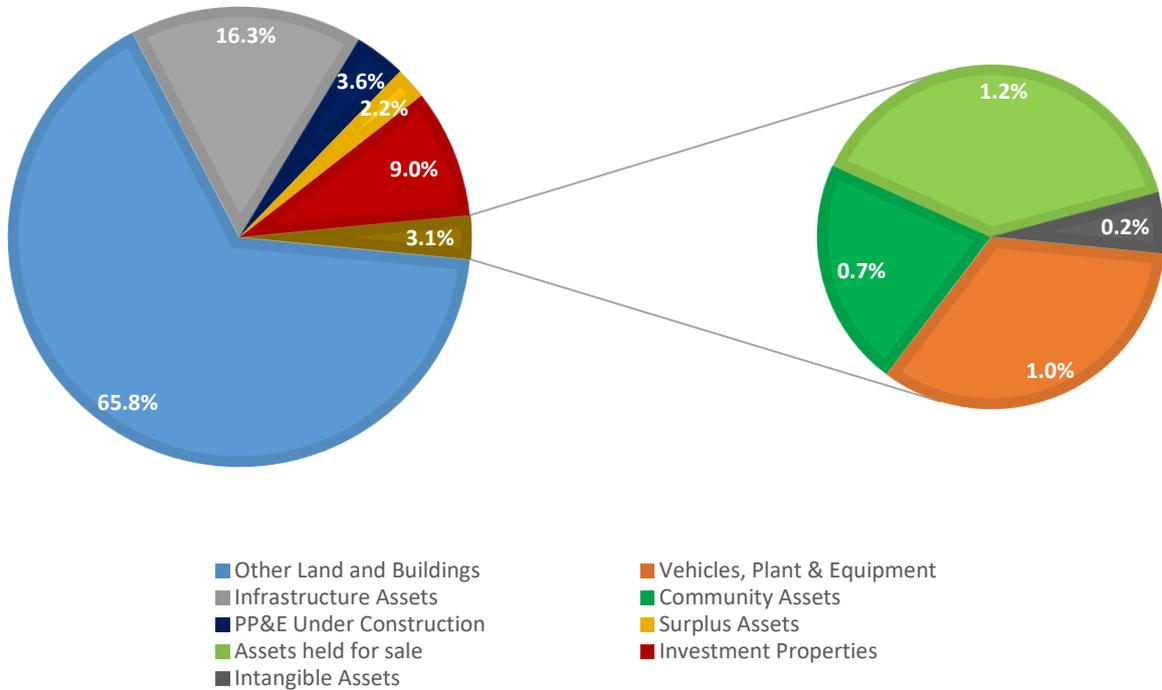

During the life of this strategy the Government is likely to issue further regulations which will place limits on investing solely for return.

Current Commercial Portfolio

The Council has an extensive property portfolio valued at £51m as at 31/3/18, which earned £4.5m of income per annum or 3.3% of the Net Revenue Stream in 2017/18. Property is held to deliver both the outcomes the Council desires and to earn income to support general council activity. The Commercial Property Portfolio has always had a dual purpose to develop the local economy and to generate a cash return for the Council.

The majority of the Council's Property Plant and Equipment portfolio is relatively low or very low risk. Investment properties are about 9.2% of the total portfolio by value. These properties are higher risk. The risks associated with these properties include exposure to fluctuations in the value of commercial property and breaks in tenancy leading to reduced income and increased costs. Most of the council's current Investment Portfolio was inherited from its predecessor councils and almost all of any associated borrowing has been repaid. There are therefore no associated costs of borrowing for these assets. Meaning that almost all of the investment income they yield can go to support the Council's Priorities.

NLC PROPERTY, PLANT AND EQUIPMENT PORTFOLIO VALUES 31/3/18

The Council has set targets to earn additional income from property investment, through a combination of active management of the existing portfolio and through the acquisition of new property investments. The overriding aim is to generate a financial return to support the Council's revenue budget. **It is proposed that commercial income contribute a maximum 5% to the net revenue budget.**

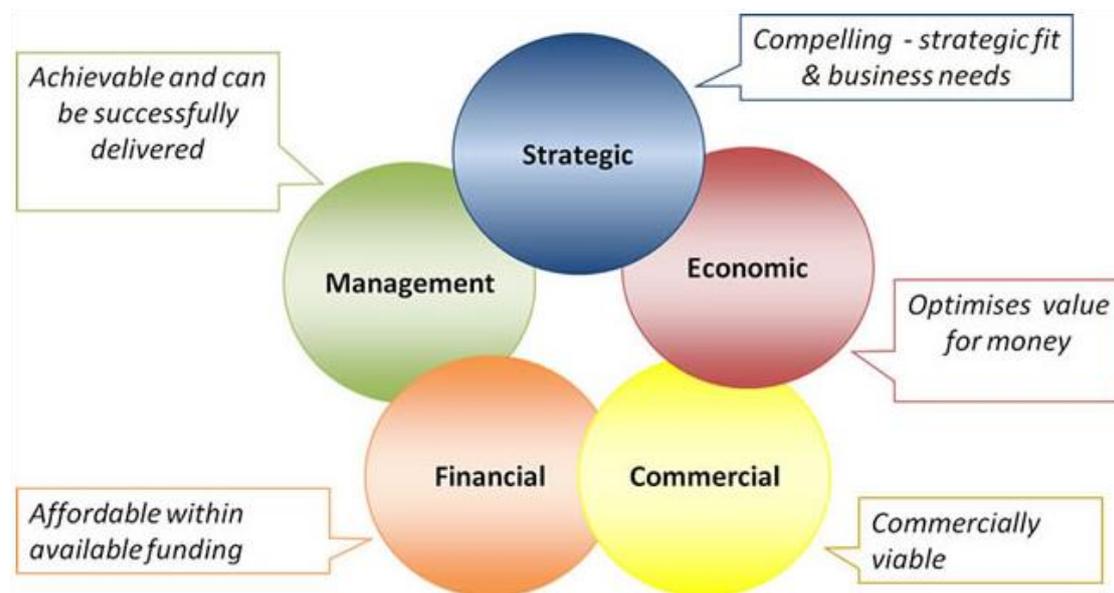

To assist in the consideration of risk various techniques may be used. However it is proposed four techniques are utilised wherever possible:-

- Real rate of return on investment this technique provides the net gain from the investment as a percentage. It uses the net present value of the cashflows which are generated by the scheme so that the time value of money is taken into account.
- Rate of return must be at least the Council's cost of borrowing, which fluctuates. To provide an adequate return above the cost of borrowing while not incurring excessive risk a target gross rate of return of between 8% and 12% has been proposed for evaluating each investment proposal. **This would generate a net return over the cost of borrowing of between 2% and 6%.**
- Internal Rate of Return (IRR) is a technique which calculates the discount rate that would need to be applied to a cashflow to make it zero. This technique allows a comparison to be drawn between different investments and types of investment and is a useful supplementary measure.

The strategy for commercial investment is considered more fully in the **Capital Investment Strategy**.

Making the Business Case

The council has developed a **toolkit to be used to create robust business cases**. It comes in two parts, a Mini Business Case that sets out the essence of the scheme at a high level and a Full Business Case which sets out the scheme in more detail. Both of these can be found on [Topdesk section KI 2060 Business Case Toolkit](#). This is based on the five case model for Capital Appraisal and Evaluation from the Treasury's Green Book:

As a public body which operates within the constraints of public policy and finite resources there is a need to choose among alternative capital investment opportunities. What makes this kind of decision demanding is not the problem of projecting return on investment under any given set of assumptions, but making the right assumptions and a robust estimation of their impact. Taken together, these can generate significant uncertainty. For that reason a degree of sensitivity analysis should be undertaken on those projects with greatest risk.

The scope of an evaluation should depend upon the complexity, scale of the impact of a programme or scheme, and also be informed by the level of benefit to the people of North Lincolnshire. Learning should be taken from previous schemes to inform future decisions.

The risk and impact of the current programme should add context to the decisions being taken and how investment proposals affect the mix of risk being taken. Higher risk investments should be judged in the context of impact.

In making an assessment of each scheme the full cost impact should be taken into account, both financing and running costs.

Governance of the Capital Programme

It is Full Council which sets the Capital Investment Strategy and approves the resource envelope for a multi-year programme of capital investment. The Constitution sets out the role of Cabinet which provides executive oversight and determines the powers and responsibilities delegated to cabinet members and officers.

An internal board of senior officers has been established to act as the Council's advisory body on the Council's major projects and capital investment within the authority and all asset management.

To support delivery of the Capital Investment Strategy, the following process will be applied in determining resource allocation and prioritisation of schemes. This process is based on the production of robust business cases. Initially only an outline business case is required but if the scheme passes the first stage of approval a detailed business case will be required. The process requires each proposed scheme cover the following:-

- (a) Strategic fit with Council Plan.
- (b) Relative importance and affordability and fit with Councils Strategic Asset Management Plan where a new or existing asset is to be developed.
- (c) Financial viability needs to be examined in 2 stages:-
 - Initial stage with 'order of costs' and indicative outputs
 - If approval is made on all the above, feasibility resources will be invested in developing the scheme to outline stage so it can be costed, while refining financial output data in order to produce the business case.

A diagram of the approved process is shown at Annex D

Annex A-The Statutory and Regulatory Framework

The Council has to work within a statutory framework. In practice this means that its spending must be in line with statutory powers and powers of competence and is not 'ultra vires'.

The relevant legislation and regulations include:-

- Local Government Finance Act 1992 which sets out the requirement to set a balanced budget.
- Local Government Act 2003 provides councils with the power to borrow within certain limits. The act also gives councils the power to make an investment.
- The Chief Financial Officer has a duty to ensure the limits referred to in the 2003 Act are not exceeded and can call on specific legal powers, if in their professional opinion, there is a danger this will happen
- Section 16 of the 2003 Act defines Capital Expenditure as:-
 1. Expenditure that results in the acquisition of, or the construction of, or the addition of subsequent costs to noncurrent assets in accordance with 'proper practices'
 2. Expenditure that meets one of the definitions specified in regulations made under the Act.
 3. The Secretary of State makes a direction that the expenditure can be treated as capital expenditure e.g. the capital receipts flexibility.
- Government have issued guidance on the calculation of the annual Minimum Revenue Provision which councils that have borrowed to finance their capital programme must make. This ensure that a prudent revenue provision is made to repay borrowing undertaken for capital purposes.
- Localism Act 2011 This Act includes a General Power of Competence which allows Councils some additional freedoms and sets out in Section 4 the need to operate through a Limited Company any activities it undertakes for purely Commercial purposes.
- A requirement to produce independently audited Council accounts each year. Each year every council must have its accounts and arrangements for obtaining value for money audited by 31st July. External Auditors also have the power to issue a Public Interest Report if they believe the council is failing in its duty to provide value for money services.
- Tax Legislation. The council generally is able to recover VAT on goods and services, but can only recover the VAT it incurs on VAT exempt activities e.g. education & training; and selling, leasing and letting of commercial land and buildings (this exemption can be waived) up to the value of 5% of all the VAT it incurs. This is known as the de minimis threshold or limit. If this limit is exceeded none of this VAT may be recovered and will be a significant cost to the council. The VAT implications of every capital scheme therefore need to be considered.

Annex B-Technical Accounting Matters

Accounting

The accounting for capital has some special rules that do not apply to revenue expenditure. For Local Authorities capital expenditure is defined under UK law as expenditure that can be capitalised under proper practice or the Secretary of State deems it to be capital. In this case proper practice is the CIPFA Code of Accounting Practice. The code defines capital as spending to purchase, enhance or construct a long term asset with the benefit gained from the spending lasting more than one year. Loans to organisations or individuals for them to spend on things that would be capital if the council had bought them can also be capital

Capitalisation policy

The Council has a capitalisation policy, which complies with the code and which sets out what types of costs can be capitalised. Under UK law anything that cannot be capitalised is a revenue cost.

Leasing

As a Lessee a lease can be a way of obtaining the use of a capital asset for a period of time. Conversely as a Lessor a lease can be used to generate an ongoing income from a capital asset. There are two different types of lease. These are Finance and Operating leases. Operating leases are purely rental agreements with the Lessor retaining the majority of the risks and rewards of ownership. Finance leases are agreements where the majority of the risks and rewards transfer to the Lessee.

There are important differences between the two types of lease. Finance leases require lessors to remove the asset from their balance sheets and lessees to include the asset on their balance sheet. Finance lease income to a lessor is received in a form that limits how this income can be used.

As the lessor there are five indicators of a finance lease they are:-

- the lease transfers ownership of the asset to the lessee by the end of the lease term
- ..the lessee has the option to purchase the asset at a price that is expected to be sufficiently lower than the fair value so as to make it reasonably certain the option will be exercised
- the lease term is for the major part of the economic life of the asset
- the present value of the minimum lease payments amounts to at least substantially all of the fair value of the leased asset
- the leased assets are of such a specialised nature that only the lessee can use them without major modifications.

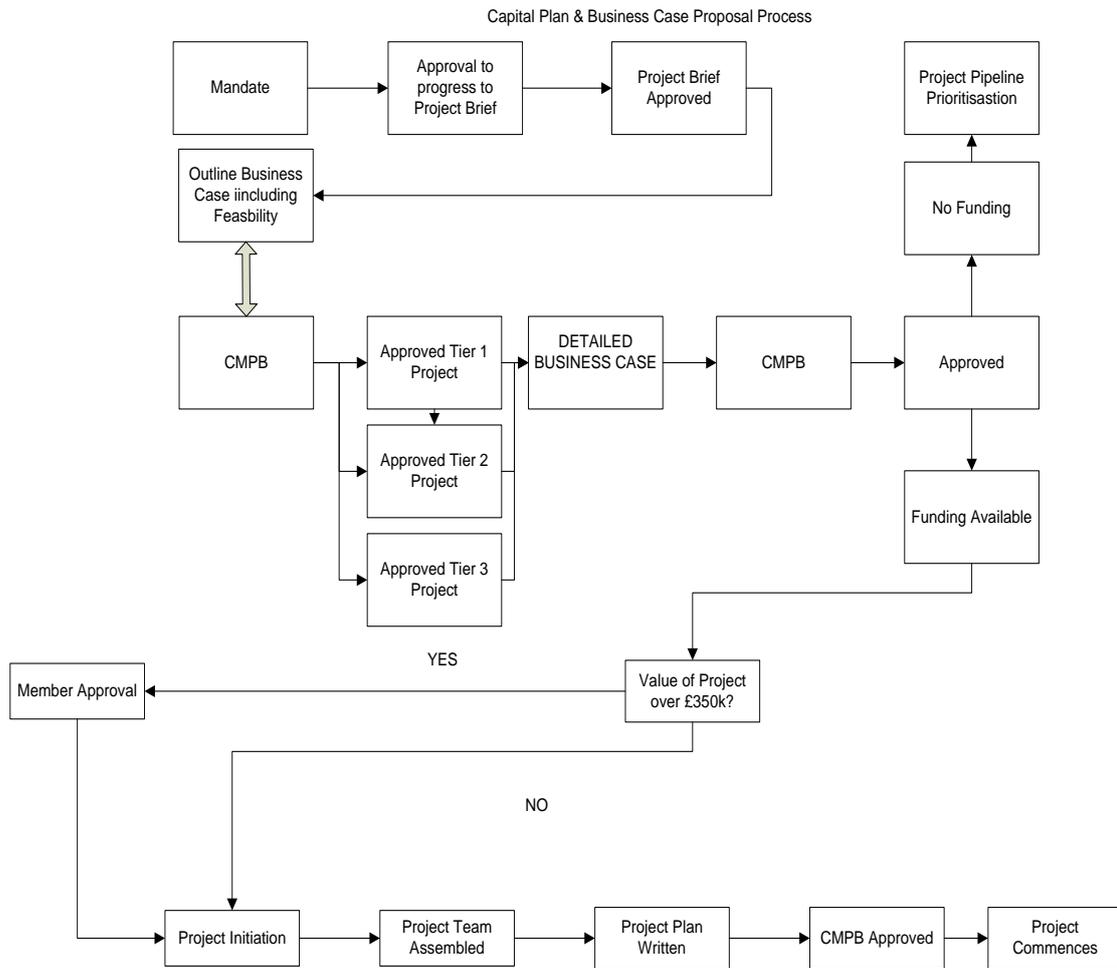

Each lease has to be assessed on its own merits

Annex C-Principles for making of Council loans:

The following principles are a framework for making loan decisions. Loans should:

- Support the Council Strategy/help deliver council outcomes
- Be authorised under statutory powers
- Be planned not reactive
- Be part of the Capital Strategy and Capital Programme for consideration and prioritisation (revenue loans are to be discouraged*)
- Be on a Commercial basis i.e. on commercial terms, or with clear justification if charging less than the commercial rate (e.g. passing on the PWLB rate which is generally below the market rate); and only after undertaking a robust due diligence process
- Minimise the risk to the public purse e.g. by being facilitated through a third party
- Be able to demonstrate the Council is lender of last resort

Annex D-Capital Scheme Approval Process

Annex E-Prudential Indicators 2018/22

Authorised Limit-The Council is asked to approve authorised limits for its total external debt gross of investments for the next three financial years. These authorised limits are consistent with the Council's current commitments and Capital strategy. They represent the worst case scenario. Risk analysis and risk management strategies have been taken into account, as have plans for capital expenditure, estimates of the capital financing requirement, debt repayments and estimates of cashflow requirements.

Operational Boundary-The proposed operational boundary for external debt is based on similar estimates to the authorised limit. It reflects the maximum external debt projected by the estimates but reflects a prudent and not worst case position.

Prudential Indicators	2018/19 £'000	2019/20 £'000	2020/21 £'000	2021/22 £'000
Capital Financing Requirement	239,850	252,925	255,564	257,905
